INFORMATION SECURITY POLICY

As Biotrend Çevre ve Enerji Yatırımları A.Ş., we commit the following principles to the implementation, review and continuous improvement of practices related to Information Security and Personal Data.

- Identifying risk acceptance criteria and risks within the scope of Information Security and Personal Data, developing and implementing controls, and ensuring sustainability through continuous improvement of risk management,

- Ensuring the protection of information assets and personal data of employees, customers, suppliers and other relevant stakeholders,

- Defining a framework to assess the confidentiality, integrity, and availability impacts of information within the scope of information security and personal data management systems,

- As a company, ensuring the protection and confidentiality of personal data and meticulously processing, storing and disposing of personal data in compliance with the Personal Data Protection Law (KVKK) and other applicable national and international legislation,

- Detailing our information security management system to include all necessary technical and administrative measures to protect the integrity, confidentiality and availability of personal data; developing transparent processes to safeguard data subjects' rights and regularly reviewing and improving these processes,

- Fully complying with all relevant national and sectoral regulations, legal obligations, contractual requirements, and fulfilling information security and personal data responsibilities arising from our corporate commitments to internal and external stakeholders,

- Establishing the capability to promptly respond to potential information security and data breach incidents, with the aim of minimizing their impact,

- Integrating environmental sustainability principles and awareness of climate change mitigation into our technological processes and practices related to information security and personal data protection,

- Prioritizing solutions that reduce energy consumption, minimize our carbon footprint, and protect natural resources within the scope of information security and personal data in order to reduce environmental impact and support the fight against climate change,

- Providing awareness and competency-based training to enhance the knowledge and skills of employees in the fields of information security and personal data protection.
